

RR Energy Systems : Global Engineering Standard Spreadsheet

Originator: Alan Lee & Todd Walker
Job Title: Supplier Development Technical Manager
Business Unit: Energy- Purchasing

NTS Number: 314
Issue 1
Date: May 2011

For the attention of the Managing Director and Quality Manager.

Dear Sir or Madam,

Scope / Applicability:

All suppliers to RR Energy Systems Inc.

Introduction:

As part of engineering standards commitment to production and visibility, the Global Engineering Standards are being removed from the current Exostar ForumPass site. This decision was made after much careful consideration. As a short term solution, a spreadsheet with all GER and GEM titles and their respective revision dates will be loaded to ForumPass.

Until Rolls-Royce implements an IT solution that better supports our business needs, we ask that you periodically check the Global Engineering Standard spreadsheet on ForumPass to ensure you have the latest revision of each standard. If you do not have the most recent GEM or GER revision, we ask that you work with your Buyer to retrieve the latest revision of the document.

These changes are mandatory and must be implemented with immediate effect.

If you have any questions regarding these new requirements, please contact your Rolls-Royce contact.
